12. Quick glossary

1. Your role

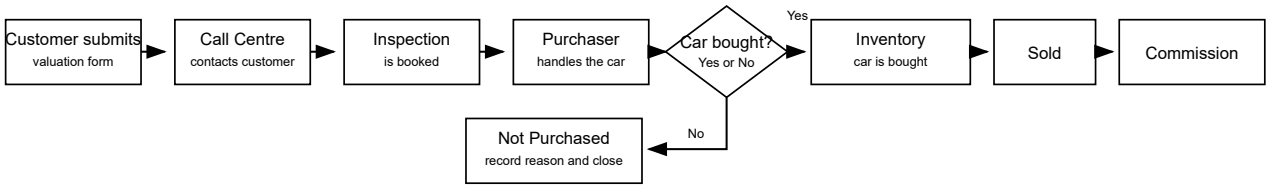

You are the Purchaser. You take over after the Call Centre has contacted the customer and scheduled an inspection. You review the vehicle, continue the conversation, and record whether the business is moving toward a purchase.

- Check the vehicle and customer details before making a decision.
- Keep the status and notes accurate so the rest of the team knows what happened.
- Record the actual purchase details only when the car is bought.
- Do not change the early Call Centre stages or assign leads yourself.

2. How a lead reaches you

A Purchaser does not receive a new valuation request immediately. The lead reaches you only after the Call Centre saves a real inspection date and time.

1. The customer submits a valuation form.
2. The Call Centre contacts the customer and confirms the details.
3. The Call Centre chooses Inspection Scheduled and saves the inspection date and time.
4. The system assigns the lead to the next active Purchaser automatically.
5. The lead appears in your Leads page and you can continue the process.

The handoff point for you is Inspection Scheduled. Before that point, the lead belongs to the Call Centre workflow.

3. Your lead workflow

Use this order when working on an assigned lead.

1. Open the lead and review the vehicle details, inspection schedule, emirate, and notes.
2. Carry out or manage the inspection according to the appointment.
3. Use Inspected when the inspection has been completed.
4. Use Under Negotiation when the customer and the business are discussing the purchase.
5. If the car is actually bought, enter the real purchase price and purchase date, then save Deal.
6. Check the linked Inventory record after saving Deal.

Example: The Call Centre schedules a 2026 Range Rover Sport for inspection on 12 September. After you inspect it, choose Inspected. If the price is still being discussed, choose Under Negotiation. If the business buys it for AED 220,000 on 12 September, choose Deal and enter those exact details.

4. Statuses you can use

Your account is offered only the Purchaser stages below.

Status	Use it when
Inspection Scheduled	The inspection has been booked and the lead has been handed to you. This is the starting point for your assigned record.
Inspected	The inspection has been completed.
Under Negotiation	The customer and the business are discussing the purchase, price, or terms.
Deal	The business has actually bought the car and the real purchase details are ready to record.

Important: You cannot use Deal as a guess or as a way to say the customer is interested. Deal means the purchase happened. The Purchaser role does not use Not Purchased as its status choice; that is handled outside this Purchaser stage.

5. Recording a Deal

Deal is the point where the lead becomes an actual purchased vehicle.

1. Choose Deal only after the purchase is confirmed.
2. Enter the Purchase Price in AED. This field is required for Deal.
3. Enter the actual Purchase Date.
4. Save the changes.
5. Confirm that the linked inventory record was created or updated.

Required information	Why it matters
Purchase Price	It is used to record the car cost and calculate profit later.
Purchase Date	It records when the business bought the vehicle.
Vehicle details	They identify the car that moves into Inventory.

Example: Sale price is AED 245,000 and the business paid AED 220,000. Save Deal with AED 220,000 as the purchase price and the real purchase date. The system can then calculate AED 25,000 gross profit before commission.

6. Inventory

Inventory is where a bought car is tracked after Deal is saved. A car should not enter Inventory merely because it was inspected or discussed.

- A Deal with the required purchase details creates the linked inventory record.

- Inventory shows the purchased vehicle and its financial information to permitted staff.
- If the car has not been bought, keep it in the lead workflow and do not treat it as stock.
- If the linked record looks wrong, do not create a second car. Ask the Super Admin to check the lead and inventory link.

Simple rule: Inspection means the car was checked. Negotiation means the purchase is being discussed. Inventory means the business has bought the car.

7. Notes and Activity

Use notes to leave a clear handover for the next person.

Area	What it means
Follow-up Note	The latest working note. Replace it with the newest useful update.
Activity	A short record of events such as views, status changes, assignments, and saved notes.
Notes History	The full saved versions of notes, including who wrote each note and the date and time.
See full details	Opens the complete history in a scrollable view when there are many entries.

Write facts, not guesses. A useful note says what was checked, what the customer decided, and what should happen next.

Example: “Inspection completed. Customer is comparing the offer with another buyer. Follow up tomorrow at 11:00 AM.”

8. Commission

The Commission page shows the commission information available to your account. The current Purchaser rate in the system is 10% of positive profit.

Formula: Gross profit = sale price − purchase price. Purchaser commission = positive gross profit × 10%.

Example	Calculation
Sale price AED 245,000; purchase price AED 220,000	Gross profit = AED 25,000
Purchaser share	AED 25,000 × 10% = AED 2,500
If there is no profit	Commission is AED 0; a loss does not create a positive commission.

Important: The amount shown depends on the saved sale, purchase, and commission records. If a deal is not yet sold or the required financial data is missing, the commission may not be complete yet.

9. What you can and cannot do

Your account is intentionally limited to Purchaser work.

You can	You cannot
See leads assigned to you after inspection scheduling.	See every lead in the system.
See prices, inventory information, and your commission information.	View the Dashboard, Incomplete Forms, Blocked Numbers, Staff Accounts, or Settings.
Move your assigned lead through the Purchaser stages.	Reassign leads or change the Call Centre owner.
Save notes and review the activity history.	Schedule the first inspection from the Purchaser side.
Record a real Deal with purchase price and date.	Mark a lead as Not Purchased from the Purchaser status list.

10. Common situations

The lead is not in my list

Check whether the inspection was scheduled and whether the lead was assigned to you. If it should be yours but is missing, ask the Super Admin to check the assignment. Do not create a duplicate.

The inspection happened but the customer is still deciding

Use Inspected first, then Under Negotiation when an active price or purchase discussion is happening. Add a note with the next follow-up.

The customer is interested but has not bought the car

Do not use Deal. Interest is not a completed purchase.

The business bought the car

Use Deal and enter the actual purchase price and date. Then confirm the Inventory record.

The purchase will not continue

Do not invent a different Purchaser status. Add a clear note and ask the Super Admin or the responsible workflow owner to close the record correctly.

11. Daily checklist

Before finishing each lead, check:

- The vehicle and inspection information are correct.
- The status matches what actually happened.
- The latest note explains the result and next step.
- Deal has a real purchase price and purchase date.
- A Deal record has the expected linked Inventory entry.
- You did not create a duplicate lead or inventory record.

12. Quick glossary

Word	Simple meaning
Inspection Scheduled	The viewing date and time were saved by the Call Centre.
Inspected	The vehicle inspection was completed.
Under Negotiation	The purchase is being discussed.
Deal	The business actually bought the vehicle.
Inventory	The list of vehicles the business has bought and is tracking.
Gross profit	Sale price minus purchase price.
Commission	A share calculated from positive profit.
Activity	Short dated history of actions on a record.
Notes History	Full saved note text with author and date/time.

Keep the record accurate, record the real purchase details, and leave a note that the next person can understand.
