11. Duplicates and blocked numbers
12. Catalog, staff, and settings
13. When something goes wrong
14. Your regular checklist
15. Quick words to remember

Important

This manual explains the operating workflow. It does not contain passwords, technical setup, test records, database instructions, or developer procedures. Keep customer information inside the authorised system and use it only for business follow-up.

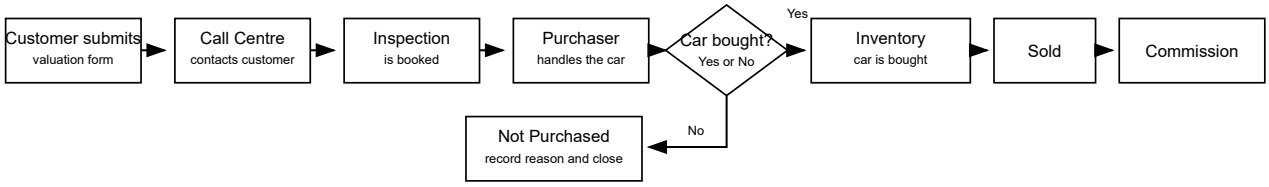

1. How to use this manual

This guide is for the person who manages the whole business process. It explains what each page means, what to check, and what to do next. You do not need technical knowledge to use it.

Use this manual in three simple ways

- When you are learning: read the workflow first so you understand how a customer moves from the form to a sale.
- During normal work: use the daily checklist and the quick glossary.
- When something looks wrong: read the Exceptions and Escalation section before changing a record.

How the work moves from one person to another

Every important action should leave a clear record: who owns it, what status it has, what happened, and what should happen next. This prevents confusion when work moves from one person to another.

2. Your Super Admin role

As Super Admin, you can see the full workflow. Your job is to make sure the right person owns each task and the information is correct.

Area	Super Admin responsibility
Dashboard	Review sales, profit, stock exposure, customer follow-up, staff work, and data quality.
Leads	View all leads, review assignments, correct status or notes when needed, export data, and audit follow-up.
Incomplete Forms	Monitor recovery work and ensure a Call Centre agent follows up before a record becomes a real lead.
Inventory	Review cars bought, stock age, sale records, and the connection back to the original lead.
Commission	Review statements, issue or mark payments, and confirm records before payment actions.
Staff Accounts	Create, edit, activate, deactivate, and assign the correct role to staff.
Settings	Maintain official business contact details and the notification email destination.
Safety controls	Review duplicates, block or unblock numbers, and protect customer data.

Permission rule

Do not share a Super Admin login. Staff should use their own role account so assignments and Activity history show the correct person.

3. How a customer moves through the system

The work is shared by stage. This stops unfinished customer details from going to the Purchaser too early and makes it clear who should act next.

Role	Main responsibility	When the role receives work
Super Admin	Monitor the full system, control staff and settings, resolve exceptions.	Can view and manage the whole workflow.
Call Centre	Contact customer, confirm details, save notes, and schedule inspection.	Receives a new verified lead or an incomplete-form recovery record.
Purchaser	Handle scheduled inspection, vehicle evaluation, purchase outcome, and deal handoff.	Receives a lead only after an inspection is scheduled.

Normal handoff

1. A customer submits a verified valuation request.

2. The system assigns the lead to a Call Centre agent.
3. The Call Centre agent contacts the customer, records the outcome, and saves a follow-up note.
4. When an inspection is agreed, the agent sets Inspection Scheduled with the confirmed appointment details.
5. The system assigns the next active Purchaser.
6. The Purchaser progresses the inspection and records either Deal or Not Purchased.
7. A Deal creates the linked Inventory record. When the inventory car is sold, commission records are created.

4. How automatic assignment works

Assignment happens automatically by taking turns. It does not depend on who clicks first, and staff do not need to be logged in to receive work.

Active account vs. being online

- Active account: An account is active when enabled by the Super Admin in Staff Accounts. This tells the system the person is eligible to receive leads.
- Being online: The system does not check whether an agent is currently logged in or sitting at their computer.
- What if everyone is offline? If leads arrive overnight or during off-hours, the system still assigns each lead to the next active agent in turn. When the agent signs in for work the next morning, the leads are already waiting in their queue.

How the Call Centre queue works

- With two or more active agents: Leads alternate evenly in turn. Lead 1 goes to Agent 1, Lead 2 to Agent 2, Lead 3 back to Agent 1, and so on.
- With one active agent: If only one agent account is active, 100% of incoming leads go to that single agent because there is no other active colleague to alternate with.
- If no agents are active: If all agent accounts are deactivated, the lead is never lost. It is saved as Unassigned for the Super Admin to review and assign manually.
- Incomplete forms: Abandoned forms use a separate recovery rotation and do not affect the main verified lead queue.

How the Purchaser queue works

- Purchasers do not receive a lead when a customer first applies on the website.
- A Purchaser is assigned only after an inspection is booked and confirmed with the customer.
- The system rotates fairly through active Purchaser accounts in the same way.

What happens if you assign a lead manually?

- The automatic rotation does not break: Reassigning a customer by hand is completely safe. It never stops, resets, or confuses the automatic turn-taking system.
- Immediate transfer with audit record: The customer moves to the newly chosen person right away, and a note is recorded in Activity showing who made the change and why.
- Future leads continue taking turns: The very next customer who submits a valuation goes to whoever is next in line according to normal rotation. The system does not get stuck or skip anyone.
- Workload balance: The chosen person handles an extra lead for that specific handoff, while all future incoming work continues to be shared evenly.

Super Admin actions

1. Keep only working staff accounts active. Deactivate staff who are on leave or departed so leads are not assigned to them.
2. Check for unassigned leads promptly if no active staff accounts were available.
3. If someone is absent, has an urgent workload problem, or there is a documented handover, open the lead and use the Assigned Team dropdowns. Choose the new owner, write the reason, and click Save reassignment. The change is recorded in Activity.

> **Queue tip**
> Two leads arriving at the exact same second may occasionally land on the same person. The system automatically balances out on the next lead.

5. How to read the Dashboard

The Dashboard is your business overview. Choose the date first. Most numbers use that date range, while stock cards show cars that are still for sale right now.

Date filter and comparison

- Today, This Week, Month, Last Month, All Time, and custom dates change sales, lead, visitor, submission, attention, data-quality, and staff results.
- Comparison always uses the same number of days. For example, a selected 10-day period must be compared with another 10-day period.
- If the primary period changes, the previous comparison clears. This prevents misleading one-day versus month comparisons.
- Current stock cards describe unsold cars now. They are not historical period totals.

Top business cards

Metric	How it is calculated	What it tells management
Revenue	Total sale price of cars marked Sold inside the selected period.	Total sales value.
Gross Profit	For each sold car: sale price minus purchase price. A loss contributes zero to this Dashboard gross-profit total.	Profit generated from completed sales.
Cars Sold	Count of inventory cars marked Sold inside the selected period.	Completed-sale volume.
Staff Commission to Pay	Total saved staff commission entries for sales in the selected period that are not marked paid.	Outstanding staff payment obligation.
Margin	Gross Profit divided by Revenue, then multiplied by 100.	Profit kept out of each AED 100 of revenue.

Margin example: AED 15,000 gross profit divided by AED 185,000 revenue equals 0.081. Multiply by 100 to show 8.1 percent. The multiplication converts a decimal into a percentage.

Current stock cards

Metric	Formula	Difference
Money in Cars for Sale	Total purchase price of all unsold cars.	An AED amount currently tied up in stock.
Average Time in Stock	Total days since purchase for all unsold cars divided by the number of unsold cars.	Average age in days of current unsold stock.
Cars Waiting Too Long	Count of unsold cars older than 90 days.	A warning count, not an AED amount and not an average.

Example: Two unsold cars cost AED 100,000 and AED 150,000, and have been in stock for 20 and 40 days. Money in Cars for Sale is AED 250,000. Average Time in Stock is 30 days. If one reaches 95 days, Cars Waiting Too Long is 1.

Dashboard: charts, action panels, and staff results

Charts

Area	How to read it
Sales and Profit	Gold bars show revenue and the green line shows gross profit by day. Hover a day for exact values. When comparison is on, read Selected and Earlier values separately.
Lead Journey	Shows movement from website visits through submission, contact, inspection stages, deal, purchase, and sold stages. It is a journey view, not a promise that every visitor becomes a sale.
Website Visitors	Counts unique tracked visitor sessions. One visitor may not submit a form.
Car Submissions	Counts submitted valuation forms. This can be higher than visitors because it is a form event, not a unique-person count.
Time Cars Have Been in Stock	Groups current unsold cars into 0-30, 31-60, 61-90, and 90+ days. The 90+ group needs attention.

Three different action panels

Panel	Question it answers	Action
Needs Attention	What needs action now?	Open the linked records and resolve the follow-up, incomplete form, or aging stock issue.
Lead Pipeline	Where are leads created in this period now?	Use it to see stage distribution. It is not an alert list.
Record Check	Is the saved data complete and consistent?	Review missing vehicle details, duplicates, and sold cars missing commission.

Record Check score: starts at 100. Each issue found deducts 4 points, down to a minimum of zero. A score of 100 means no listed issue was found in the selected period.

Staff Performance and Staff Results

Metric	Meaning
Assigned	Leads from the selected period assigned to that person.
Handled	That person's assigned leads with a recorded status change.
Deals	That person's assigned leads that reached Deal.
Profit and Commission	Saved sale and commission records for the staff member. They do not automatically equal the number of Deals.

Do not confuse

> Handled does not mean Sold. It means a status update was recorded. Deal is a later purchase decision. Sold happens later after the inventory car is sold.

6. Leads: review, follow-up, and Activity history

The Leads page shows verified valuation requests. Use it to check follow-up, who owns each lead, possible duplicates, and the current status.

Normal review process

1. Filter by status, make, emirate, date, or attention item.
2. Open the customer record and check the assigned Call Centre agent and Purchaser.
3. Review current vehicle details, contact information, latest follow-up note, and Activity history.
4. Confirm the current status matches the evidence in the note and appointment details.
5. To reassign a lead, use the Assigned Team dropdowns on the lead page. Choose the new owner, write why you are changing it, and click Save reassignment. The change appears in Activity so everyone can see who changed it and why.

Notes History and Activity

- The Follow-up Note box shows the current working note for the next person. Notes History keeps every saved version separately.
- When a staff member saves a note, the latest version stays in the note box and the old version is kept in Notes History with the date and time.
- Activity records events such as submission, assignment, status changes, and staff views. Saved note text is shown in Notes History so the main Activity list stays easy to read.
- The page shows the five newest activities first. Notes History also shows the five newest notes and has See all notes for the complete scrollable list.
- Use Activity to verify who viewed, updated, or handed over a record. Do not use it to store unnecessary personal information.

Duplicate review

A lead can be flagged as a possible duplicate when the same verified phone submits again within 30 days. Treat this as a review flag, not automatic proof of spam. Compare the customer and vehicle context before deciding what action is appropriate.

7. What each lead status means

Always choose the status that matches the real customer situation. Do not move a lead forward just to improve a Dashboard number.

Status	Use when	Required operational action
New	A verified valuation request has arrived.	Ensure it is assigned and ready for first contact.
Pending	The record is being worked on but the customer has not been contacted yet.	Make the first contact and record the result.
Contacted	A call or WhatsApp follow-up was completed.	Save the outcome and next action.
Inspection Scheduled	A viewing is booked but has not happened.	Confirm date, time, emirate, and Purchaser assignment.
Inspected	The Purchaser has seen the vehicle.	Record inspection outcome and next step.
Under Negotiation	The vehicle has been seen and the price is being discussed.	Keep a current note and follow-up date.
Deal	The customer agreed to sell and the business bought the car.	Record actual purchase price and purchase date. This creates Inventory.
Not Purchased	The discussion ended without buying the car.	Record a clear closing note. Do not create Inventory.

Decision rule

Only use Deal when the vehicle was actually bought. A positive conversation, planned inspection, or estimated value is not a Deal.

8. How incomplete forms work

An incomplete form means a person started the valuation form but did not finish it. It may become a real lead, but it is not one yet.

Control rules

- Incomplete forms are assigned to Call Centre first through their own rotation.
- Purchasers do not receive incomplete forms.
- A Call Centre agent must contact the customer and manually confirm the missing customer and vehicle details.
- Before conversion, the record needs a follow-up note, customer name, valid make and model, year, mileage, inspection emirate, and inspection date/time.
- The agent uses Convert to Lead and Schedule Inspection only after the customer confirmation is complete.

- Conversion creates one real lead, keeps the Call Centre history, schedules the inspection, and assigns the next active Purchaser.

Super Admin review

1. Check incomplete forms regularly, especially records waiting for first contact.
2. Review notes before conversion if the details appear unusual or incomplete.
3. Do not force a conversion just to increase lead count. An unconfirmed record should remain an incomplete-form follow-up.
4. Use Blocked Numbers only for genuine abuse or spam. A customer who simply left the form is not automatically spam.

9. How inventory works

Inventory is only for cars the business has actually bought. It should always be linked to the original lead and real purchase details.

Inventory workflow

1. A lead reaches Deal.
2. The actual purchase price and purchase date are recorded.
3. The system creates the linked inventory record.
4. The car remains in stock until sold.
5. When sold, record the actual sale price and sold date. The system creates the related commission entries.

Control	Why it matters
Linked lead	Keeps the purchase trail connected to the original customer conversation.
Purchase price	Provides the factual cost basis for profit and commission.
Sale price and sold date	Provide revenue, profit, sales-period reporting, and commission timing.
Stock age	Shows how long cash has been tied up in an unsold car.
90+ day review	Signals a car that needs a price, sales, or follow-up review.

Super Admin check before marking a car sold

Confirm the sale price and sale date against the approved transaction record. These values affect revenue, profit, staff commission, and developer commission statements.

10. How commission works

Commission is created when an inventory car is sold. Use this page to check the amount, the sale behind it, and whether it has been paid.

Current commission rates

Recipient	Current rate	Basis
Call Centre Agent	2%	Positive profit on the sale.
Purchaser	10%	Positive profit on the sale.
Developer share	2%	Positive profit on the sale.

Profit formula: Sale Price - Purchase Price = Profit. A loss or zero profit creates zero commission. Example: buy at AED 170,000 and sell at AED 185,000. Profit is AED 15,000. Agent commission is AED 300, Purchaser commission is AED 1,500, and developer share is AED 300.

Statement timing and status

Status	Meaning	Super Admin action
Draft	The statement is still open and can collect eligible sales.	Review entries and correct sale records before issuing.
Issued	The statement is prepared and awaiting payment.	Check approval and payment evidence before marking paid.
Paid	Payment is recorded.	Do not alter settled history without a formal correction process.

Commission is grouped monthly and paid by quarter for the developer statement. If a sale belongs to a month that is already issued or paid, it is carried forward to the next open statement so settled records are not changed.

Payment control

1. Open the relevant statement or staff commission record.
2. Verify sale, purchase, profit, commission rate, recipient, and payment evidence.
3. Use the payment action only after confirmation.
4. Add or retain a payment note where the screen provides one.
5. Recheck the outstanding total after marking paid.

11. Duplicates and blocked numbers

Blocked Numbers is for confirmed spam or repeated verification-code abuse. Use it carefully because it stops a number from requesting a new code.

Situation	Correct action
Confirmed spam or abusive behaviour	Mark the lead as spam or block the number with a clear reason.
Repeated unverified OTP requests	Review the suspicious number and block only when appropriate.
Customer blocked by mistake	Unblock the number after confirming it is legitimate.
Possible duplicate lead	Review the duplicate flag and customer context. Do not block a genuine repeat customer simply because the phone repeats.

Effect of blocking

A blocked number cannot request new verification codes. Blocking is not a routine lead-closing action and should never be used because a customer did not answer one call.

12. Catalog, staff, and settings

Vehicle Catalog

The Vehicle Catalog controls the make, model, and trim dropdowns. Keep names consistent, and do not delete an option until you know it is not used by current records.

- Add or update makes, models, and trims only from approved business information.
- Use the catalog to prevent free-text vehicle data and inconsistent spelling.
- Review dependent dropdown behaviour after a catalog change: model belongs to make, and trim belongs to model.

Staff Accounts

- Create one account per real person and choose the correct role.
- Activate only staff who should receive new queue assignments.
- Deactivate departing or unavailable staff so they are skipped by future rotation.
- Do not reuse an old person's account for a new employee. Activity history must remain attributable to the original person.
- Review the staff list after role or active-status changes.

Settings

- Keep official WhatsApp number, call number, and notification email accurate.
- The saved notification email is the destination for new lead notifications.
- Use Send Test Email after changing the notification email to confirm the destination.
- Only use an authorised business inbox for customer lead notifications.

13. When something goes wrong

Common exceptions

Situation	First action	Escalate when
No active agent or purchaser	Activate the correct staff account or assign the record manually with a note.	No authorised person is available to take ownership.
Customer details are missing	Keep it in the correct follow-up stage and obtain confirmation. Do not guess.	Required information cannot be verified.
Lead is assigned to the wrong person	Reassign with a clear reason and preserve the existing note/history.	The handoff affects a dispute or customer complaint.
Possible duplicate	Compare phone, timing, customer, and vehicle details.	There is evidence of fraud, abuse, or conflicting transaction information.
Commission appears missing	Confirm the inventory car is marked Sold and has sale price and sold date.	A valid completed sale still has no commission entry.
System error	Do not repeatedly submit the same action. Refresh once and check whether the record already changed.	The error repeats, data is missing, or a financial action cannot be confirmed.

Customer-data handling

- Use customer names, phone numbers, vehicle details, and notes only for authorised CarVibe business operations.
- Do not export or share customer records through personal messaging apps, personal email, or unapproved files.
- Use clear factual notes. Avoid sensitive, insulting, or unnecessary personal comments.
- If a customer asks about deletion, privacy, or consent, follow the approved company process and escalate when needed.

14. Your regular checklist

Daily

- Check Needs Attention for first-contact delays, stalled leads, incomplete forms, and cars over 90 days.
- Review new and pending leads for correct Call Centre assignment.
- Review inspection-scheduled leads for correct Purchaser assignment and complete appointment details.
- Check Activity and notes for a sample of important or overdue records.
- Review any duplicate flags or blocked-number actions.

Weekly

- Review Dashboard trends, Lead Journey, stock age, and staff performance.
- Review leads with no recent update and confirm follow-up ownership.
- Review current unsold stock, especially 61-90 and 90+ day cars.
- Confirm active staff accounts match the real operating team.
- Review Record Check issues and resolve missing vehicle details, duplicates, or missing commissions.

Monthly and quarterly

- Review completed sales, purchase costs, revenue, gross profit, and margin.
- Review commission entries before issuing statements or marking payments paid.
- Confirm paid records have accurate payment evidence and notes.
- Review notification email and official contact settings.
- Review access: deactivate staff who no longer need access and confirm role permissions are correct.

15. Quick words to remember

Term	Meaning
Verified lead	A valuation request that completed verification and entered the Leads workflow.
Incomplete form	A customer started the form but did not finish. It is a Call Centre recovery task, not yet a real lead.
Round-robin	Automatic rotation of new work across active accounts in order.
Call Centre assignment	The first owner of a new verified lead or incomplete form.
Purchaser assignment	The owner assigned after inspection scheduling.
Activity	Dated history of views, notes, assignments, and important updates.
Follow-up note	The latest working note for the next person; previous saved versions remain in Activity.
Deal	The business bought the car. Inventory is created.
Not Purchased	The customer discussion ended without a purchase. Inventory is not created.
Revenue	Total sale price from sold cars in the selected period.
Gross Profit	Positive sale price minus purchase price from sold cars.
Margin	Gross Profit divided by Revenue times 100.
Current stock	Cars still unsold now.
Record Check	Dashboard checks for missing vehicle details, duplicates, and sold cars missing commission.

Final operating reminder

Use the Dashboard to identify what needs attention, then open the detailed record to take action. Keep ownership, status, note, and Activity history accurate so every customer handoff is clear.
