RED	Likely question
GREEN	Simple answer and difference

Before you begin

CarVibe Dashboard Walkthrough - Demo Coaching Script

> This PDF is only for the Dashboard walkthrough. Do not read every word. Use the gold box as your line, look at the feature while speaking, then use the blue box to guide what you show. Give one scenario where it helps the audience understand.

1. Start here: what this Dashboard is for

Purpose: Give one clear business picture without opening every page.

SAY THIS

Good day. This is the CarVibe Business Overview. Instead of checking Leads, Inventory, Commission, and staff records one by one, this page brings the important numbers together. I use it to see sales, customer follow-up, current stock, and staff work in one place.

SHOW / CLICK

Start on Dashboard. Point to the title, then slowly move from the date filter at the top down to the staff results table.

LIKELY QUESTION

Are these only display numbers?

ANSWER / DIFFERENCE

No. The dashboard reads the saved business records. It is an overview and each attention item or pipeline row can take me to the relevant filtered records for follow-up.

2. Date filter: decide the period first

Purpose: Every sales, lead, visitor, and staff result should be read for a chosen period.

SAY THIS

Before reading any number, I choose the date period. The default is Today, so it starts with the most current picture. I can change it to This Week, Month, Last Month, All Time, or choose exact dates from the calendar. Once I choose a period, the sales, leads, visitor, submission, and staff results refresh for that period.

SHOW / CLICK

Point to Today. Change it to This Week, then back to Today. If safe, choose a custom range in the calendar and show the selected start and end date before applying it.

LIKELY QUESTION

Does every card follow this date filter?

ANSWER / DIFFERENCE

The sales, lead, visitor, submission, attention, record-check, and staff sections use the selected period. Current stock cards are different: they show the cars still for sale right now, so they are not limited by a historical date filter.

3. Compare periods: simple and fair

Purpose: Compare like-for-like periods so the result is not misleading.

SAY THIS

If I want to know whether we improved, I use Compare. I can choose Previous Period, Same Time Last Year, or another earlier period. The system always compares the same number of days. For example, if my main period is September 1 to 10, which is 10 days, and I choose August 10 as the earlier start, the system automatically compares August 10 to 19 - also 10 days.

SHOW / CLICK

Click Compare: Off. Use Previous Period once. Point to the gold comparison banner: Primary is the period I selected, while Comparison is the earlier period. Then point to a KPI card and a chart tooltip where both values are visible. Click Clear Comparison after the example.

LIKELY QUESTION

Why can I not choose an earlier period with a different number of days?

ANSWER / DIFFERENCE

Because one day versus one month would give a misleading result. Matching the length makes the comparison fair. If I change the main date filter, the old comparison clears automatically, so an old one-day comparison cannot accidentally stay beside a month.

4. Top business cards: Revenue, Profit, Sold, and Commission

Purpose: Understand the money and completed sales for the selected period.

SAY THIS

These four cards answer different questions. Revenue is the total sale price from completed sales. Gross Profit is sale price minus purchase price. Cars Sold is the number of completed sales. Staff Commission to Pay is commission already earned but not yet marked paid. They are related, but they are not the same amount.

SHOW / CLICK

Point left to right. Use a simple scenario: a car bought for AED 170,000 and sold for AED 185,000 adds AED 185,000 to Revenue, AED 15,000 to Gross Profit, one to Cars Sold, and AED 300 to unpaid staff commission if the two-percent rule applies.

LIKELY QUESTION

What does the Margin badge mean?

ANSWER / DIFFERENCE

Margin shows how much of Revenue remains as Gross Profit: Gross Profit divided by Revenue, then multiplied by 100 to turn the decimal into a percentage. Example: AED 15,000 profit divided by AED 185,000 revenue is 0.081. Times 100 equals about 8.1%. We multiply by 100 because a percentage means 'out of every 100'.

4A. Formula guide: how the Dashboard gets each number

Purpose: Give a practical formula for every money, stock, and quality number before questions come up.

SAY THIS

For Revenue, the system adds the sale price of every car marked Sold inside the selected period. Formula: Revenue equals total of sale prices. For Gross Profit, it adds each sold car's sale price minus purchase price, but a loss contributes zero to gross profit. Formula: total of the positive sale profit per car. Staff Commission to Pay is the total saved staff commission entries for sales in the selected period that are not marked paid. The margin badge is Gross Profit divided by Revenue times 100.

SHOW / CLICK

Use two sales as an example. Car A: bought AED 170,000, sold AED 185,000, so profit is AED 15,000. Car B: bought AED 100,000, sold AED 95,000, so it is a loss of AED 5,000. Revenue is AED 280,000. Gross Profit is AED 15,000, because the loss does not create negative commission profit. Margin is AED 15,000 divided by AED 280,000 times 100, or about 5.4 percent. If Car A created AED 300 commission and it is still unpaid, that AED 300 appears in Staff Commission to Pay.

LIKELY QUESTION

How are stock cards and comparison changes calculated?

ANSWER / DIFFERENCE

Money in Cars for Sale equals the total purchase price of every unsold car. Average Time in Stock equals the total days since purchase of all unsold cars divided by the number of unsold cars. Cars Waiting Too Long equals the number of unsold cars older than 90 days. When comparison is on, the percentage change is Current minus Earlier, divided by Earlier, times 100. If Earlier is zero and Current has a value, the Dashboard shows New instead of inventing an infinite percentage. Record Check starts at 100 percent and subtracts 4 points for each issue found, down to a minimum of zero.

5. Sales and Profit chart

Purpose: See which days created revenue and profit, not only the total.

SAY THIS

This chart shows the daily movement behind the top cards. The gold bars are Revenue and the green line is Gross Profit. I can hover any day to see the exact amount. This helps us see whether one big sale created the result or whether sales were steady across several days.

SHOW / CLICK

Hover one day with activity. If comparison is on, point to the tooltip: it clearly separates the selected day from its matching earlier day. Point to the chart legend before hovering.

LIKELY QUESTION

Why are there two values when comparison is on?

ANSWER / DIFFERENCE

One is the selected period and the other is the matching earlier period. For example, September 8 is compared with the matching day from the earlier period, not with a random date. The chart labels both values so I do not confuse them.

6. Lead Journey, Website Visitors, and Car Submissions

Purpose: Show how people move from visiting the site toward a completed sale.

SAY THIS

Lead Journey is the customer flow: website visitors, submitted valuations, contacted leads, inspection stages, deals, and completed sales. Website Visitors counts unique website visits. Car Submissions counts valuation forms submitted. These are different: one visitor can submit no form, while the same person can return more than once. The smaller charts show the daily visitor and submission pattern so I can see which days generated interest.

SHOW / CLICK

Point to the Lead Journey bars first, then Website Visitors and Car Submissions. Hover one bar in each. If comparison is on, show the two colours and explain selected period versus earlier period.

LIKELY QUESTION

Why may Submissions be higher than Visitors?

ANSWER / DIFFERENCE

They measure different events. Visitors are unique tracked sessions, while submissions are form submissions. A returning visitor can submit again, and test or repeat submissions can also increase the form count. The purpose is to see interest and conversion flow, not assume the two numbers must match.

7. Current stock: three cards with different meaning

Purpose: Separate cash tied up, average stock age, and urgent slow stock.

SAY THIS

These three cards use the current unsold cars, but each answers a different question. Money in Cars for Sale is the purchase money tied up in every car still unsold. Average Time in Stock is the average age in days of those current unsold cars, counted from each purchase date until today. Cars Waiting Too Long is only the number of unsold cars that have passed 90 days.

SHOW / CLICK

Use this example: two unsold cars cost AED 100,000 and AED 150,000. Money in Cars for Sale is AED 250,000. If they have been in stock for 20 and 40 days, Average Time in Stock is 30 days. If one becomes 95 days old, Cars Waiting Too Long becomes 1.

LIKELY QUESTION

Are Money in Cars for Sale and Cars Waiting Too Long the same?

ANSWER / DIFFERENCE

No. AED 250,000 is money across every unsold car, including a car bought yesterday. One vehicle waiting too long is only the over-90-day warning. The average 30 days is a speed or age measure. Money, days, and warning count are three different things.

8. Time Cars Have Been in Stock

Purpose: See the full age breakdown of the current unsold cars.

SAY THIS

This chart groups all cars currently for sale into 0 to 30, 31 to 60, 61 to 90, and 90-plus days. Green means fresh stock, blue means active stock, amber means watch it, and red means it needs attention. It gives more detail than the single Cars Waiting Too Long card.

SHOW / CLICK

Hover each visible slice. Point out the colour meaning and the car count. If a red slice exists, click the attention link elsewhere only if you want to show the actual inventory list.

LIKELY QUESTION

Is this the same as Average Time in Stock?

ANSWER / DIFFERENCE

No. Average Time gives one average number. This chart shows where every current car falls by age. Example: an average of 30 days could still hide one 95-day car; the red 90-plus slice makes that problem visible.

9. Needs Attention, Lead Pipeline, and Record Check

Purpose: Know what needs action, where leads currently are, and whether the data has issues.

SAY THIS

These three panels have different jobs. Needs Attention is the action list: leads waiting for first contact, leads with no recent update, incomplete forms, and cars over 90 days. Lead Pipeline is not an alert; it shows where leads created in the selected period are now, such as New, Contacted, Inspection Scheduled, Negotiating, and Deal. Record Check is data quality: it looks for missing car details, possible duplicates, or sold cars missing commission.

SHOW / CLICK

Point to each heading first before reading any count. Click one row in Needs Attention to show the filtered records, then return. Click one Lead Pipeline stage if you want to prove the status filter. Show Record Check last and explain that a zero means there is no issue found for that check.

LIKELY QUESTION

Why do Needs Attention and Lead Pipeline look similar?

ANSWER / DIFFERENCE

Needs Attention asks, 'What must the team act on now?' Lead Pipeline asks, 'Where are the leads from this period now?' A Contacted lead can be healthy in the pipeline and not need attention. Record Check is different again: it checks whether the saved data is complete and consistent.

10. Staff Performance and Staff Results

Purpose: See workload, follow-up activity, deals, profit, and commission per person.

SAY THIS

Staff Performance shows three different counts. Assigned means leads from the selected period assigned to that staff member. Handled means their assigned leads where a status change was recorded. Deals means their assigned leads that reached Deal. So Assigned is workload, Handled is recorded action, and Deals is conversion to a purchase decision. I can filter the chart to Agents only or Purchasers only. The table below adds saved Profit and Commission for each person.

SHOW / CLICK

Use this scenario: Agent A is assigned 10 leads, updates 7 of them, and 2 reach Deal. The chart shows Assigned 10, Handled 7, Deals 2. Then point to the staff table: Profit and Commission only reflect saved sale/commission records, so they do not automatically equal the number of deals.

LIKELY QUESTION

Does Handled mean the lead was sold?

ANSWER / DIFFERENCE

No. Handled only means there is a recorded status update on an assigned lead. A deal is a later step, and a sold car is later again. This separation prevents us from calling simple activity a completed sale.

11. Closing line

Purpose: Finish with the business value, not the UI.

SAY THIS

To summarize, this Dashboard lets management answer four practical questions quickly: Are we making money? Are leads being followed up? Is cash sitting too long in stock? And is the team moving assigned leads forward? When a count needs action, I can open the related filtered records instead of searching manually.

SHOW / CLICK

Return to the top of the Dashboard. Point once to the date filter, KPIs, attention panel, stock cards, and staff table.

LIKELY QUESTION

What should we do after seeing a problem?

ANSWER / DIFFERENCE

Use the Dashboard to identify the issue, then open the linked Leads or Inventory records to take action. The Dashboard is the control panel; the work itself happens in the detailed records.

12. Reassigning a lead when needed

Purpose: Explain the Super Admin reassignment control and why it is not part of the normal automatic queue.

SAY THIS

Normally the system assigns leads by taking turns between active staff. If an agent is absent, has an urgent workload problem, or there is a documented handover, I can reassign the lead from the Assigned Team section. I choose the Call Centre agent or Purchaser, write the reason, and save the reassignment.

SHOW / CLICK

Open a lead detail page and point to Assigned Team. Show that Super Admin sees the dropdowns and the Save reassignment button. Change only a demo or approved record during the presentation, and show the reason field before saving.

LIKELY QUESTION

What happens after I reassign it?

ANSWER / DIFFERENCE

The selected owner becomes the current owner, the automatic queue is not changed for future leads, and the reassignment is recorded in Activity with the person who made the change, the new owner, and the reason. Call Centre and Purchaser accounts can see the assignment but cannot change it.
