Canva design captions - from beginning to end

So, that's why I was like, it's better than when I am back. And now we are in the process of trying to just, you know, coming back, you know, to figure out what's happening. Okay, okay. So, let me know whenever you're ready, Sir Nash. Let's discuss this milestone 3. Yeah, sure. Show it to me. Okay. Are you able to see my screen here on my end? Yeah, I'm using the phone. Is that okay? I think it's better if you will use your laptop. It's better if a bigger screen. Because later on, I will demonstrate everything regarding its functionalities. Okay. did you do in milestone 3? Oh, for the milestone 3, this is all about the private admin dashboard. Okay. So, before... we proceed for the milestone 3 explanation, what we did before is the milestone 2, where we set up the data structure. If you still remember, then the half of milestone 3 is that, what we call that, the design of the admin dashboard. For today, for the milestone 3, all about its functionality. Inside the admin dashboard. But is the admin dashboard already been pushed in the GitHub? Yes, already did. But it's still static since it's only for the milestone 2. Okay. Because the last time I checked in the GitHub, it was updated one month ago. There was no any updates. Really? Yeah, when I go out. Okay. I saw it was... Okay. No problem. Let me open this here. Okay. You have to... It takes time to load. Oh. It's okay. Just take your time, Sir Nash. And Sir Nash, since Chris will not be able to attend today, is it okay if I record this session? Okay, no problem. Okay. It was in the private debate. I see in the drop-down, I have milestone 2 and milestone 1. Oh, yes, Sir. branches. Yes, Sir Nash. I'm not yet pushing the milestone 3 since we need to finalize everything. We are still only... I mean, we are still on the milestone 2 only. So, for milestone 3, once we were done for the finalization, I will push this through your GitHub. Is your laptop already open or not yet? It's open. I just want to... The link. Oh, I will give you... No, no, no. It's open. We'll open it here. Okay. Zara, we agreed what time you're supposed to be in the house. We agreed what time you guys need to be in the house. What time you guys need to be in the house? Six. And what are you doing outside? I'm not even outside. I'm staying here now. Where is Debra? He's still outside. Doing what? He's playing with the doom and everyone else. admit it real quick for a while. Okay. Log out from here, huh? Sure. So, are you ready, Sir Nash? Yeah, I'm here now. Okay, great. Can you hear me? Yes. I hear you very well. Okay. So, for... Let me just... Where's my Google meeting? Okay. Zara, what are you watching? Okay. Okay. So, today, Sir Nash, I will walk you through to the milestone 3. So, this is all about that. Bindash. Board for CarVibe Dubai. So, this is a private side of the system. So, it's more on functionality where you see every customer request the valuation and every quarter you've bought and then the commission owed each month. Later on, I will demonstrate each of the page inside the admin dashboard. Okay? So, let me just go here. Okay. So, last time... on milestone 1, together with the milestone 2, it was the public website where the customer submits. Then, for milestone 3, it is the other end. So, what happened is that from the information after it's sent, three things were added. So, first, the full lead and then pipeline from new to deal. Then, second is tracking for cars you purchase plus the 2% commission on every sale. Then, third is spam protection because every verification message we have is billed if we already published this in the production. Okay? So... Are we still using Vercel? Sorry? Are we still on Vercel? Vercel? Ah, yes. Your... The website is still published in Vercel. Okay. Okay. So, let's proceed with the milestone 3. So, for the milestone... So, for the non-spinning milestone 3, it's all about the lead pipeline and abandoned inquiries. So, lead pipeline... Later on, I'm going to demonstrate this. Okay? Lead pipeline, all about the leads coming from the landing page. I mean, coming from the valuation form. Okay. for we have the incomplete form section. I mean, page. Where every visitor tried to fill out inside the valuation form. Then, they abandoned the form. But still, we have their data. Okay? Then, for the spam protection overview, this is all about the... If ever someone tried to... Okay? Fill up many times in the valuation form. Automatically, they will directly go to the spam page. So, we will see their information. Let's say, for example, me. I tried to fill out in the valuation form twice or three times. Automatically, you will see my information there. Okay? So, let's go with the demonstration. Let me guess. Are you able to see my screen, Sir Nash? Yeah, I'm seeing. Okay. So, it's kind of looks overwhelming. But, sooner, you will understand why we already inputted this. So, this is the first page. Okay. I used for a quick health check. So, the top cards show how many leads are in each stage. So, we have new, pending, contacted, inspection, scheduled, and inspected, under negotiation, then deal or not purchase. It's already a pattern. So, let's say, for example, me, I'm the visitor. I completely submitted the form. So, automatically, it will increase it by one. Plus one here. And then, if ever I... I I mean, if ever I check the information of that client, I can select from the drop-down, pending. And then, if ever I already contacted that person, then select the contacted. Then, until here. So, here is the last process. If the visitor you contacted is dealed on that. price or not. And then, here, we have, uh, message as click, call now clicks, then incomplete forms, visitors today. So, for the message as clicks, um, Sir Nash, let me just open the... There you go. Are you able to see my screen, Sir Nash? And, uh, other side? Yeah, I can see it on this board still. How about this one? Okay,

change to the website. Okay. So, here, for the message as clicks, if ever I click this message as, automatically, um, it will increment. See? It changes. Hmm. Earlier, it's zero. Okay, let's try the call now clicks. If ever I tried to click the call now, automatically, plus one. Okay, but, uh, yes, it's delayed, but where is the number? Like, if in, in case he puts the number? Oh, later on, um, we will proceed on that. Here, uh, this is just the quick, quick overview for that total, uh, yeah. Okay? So, uh, also on this one, this is just a quick, uh, total of numbers of how many incomplete forms, and then how many visitors today. So, this is always resetting every 12-a. Okay. So, after, after 4 hours and 6 minutes, this will be back at zero value. But where does it go? Like, it's a daily thing? Like, if I change the date, I'll see it? Like you said, now it will reset to zero. What about the previous, if I need to know? Oh, here. We have here the website visitors per week. So, you will see the, until Monday to Sunday. So, let's say, for example, uh, let's try. So, today, we only have 6 visitors. If I attempt to visit this website, let's try the incognito tab. There. We just, oh, I'll try the other side. It detects the IP, I mean the cache of the browser. So, possible it will not increment. There you go. See? It added plus 1. Because I visit the website in the incognito tab. So, every time, um, every time someone visit the website here in the landing page, it will increment plus 1. But if ever the, if ever you already have a data cache in this browser, this will not be counted as 1. It's like, um, the tracking of the visitors is already have a... Already have the memory of the browser you have. Okay? Okay. Let's go. Continue. So, here is the website visitors as mentioned earlier. Um, we have the weekly, uh, total visitors. So, let's say, for example, today, um, we have a total of 7. So, today is Sunday. So, it's correct, right? Uh, visitors total of 7. So, tomorrow, Monday. Tomorrow, Monday. Um. this will be back to 0. And then, 0 here. Okay? Then, for the submissions, um, if ever there's, uh, new leads here, automatically, um, it will show here. As well as here. Recent leads. Okay? Any questions, Sir Nash? Would you like me to... Is it, um, overwhelming? Or would you like me to... No, no, no. Like, now you're telling me, if it is finished the week, it goes to 0. Yeah. So, if I want to visit... If the other week, how will I see? Oh. You want to have that part as well? Yeah. Like, if I want to visit the other week, I just need to change the date. Then, I will see. Usually, let's say, after 10 days, right? Mm-hmm. I want to check what happened, uh, on the first of this month. So, I need to just go drop down, change the date on the first, what really happened, and I can check. Oh, sure. Uh, let's go ahead and add that. Uh, add that. Let me just put that note to you. I want it as a drop down. So that, like, there's a place. Okay, let's say, first of, uh, September. I go, first of September, click. Then, I see all the data of what happened first of September. Okay. Like, I can backtrack. Is it only for the website visitors, or... Yeah, every... Whatever that you have here, it's showing me what's up visitors, what I converted. I need to be able to see... see... I data up, let's say, the month is finished, right? I want to know what really happened on the 2nd of August. How can I retrieve that data? Hmm. Okay, let's add that. Let's add that one. Backtracking from every each month. Okay. Any, uh, aside for that, uh, Sir Nash, do we have any verification of this? No, I don't. Okay. Okay. Okay. So, for the leads, uh, Sir Nash, uh, let me just create a demo leads for a while. Here. So, just double check here. Okay. So, for the leads directory, um, this is the working list of valuation requests. So, I can search by customer or by cal. This is a filter by status. And then, um, if I open the customer, automatically, you will see the record. Let's try sample. So, for the... Dropdown for the all status, we have a checkmark. If I want to select new and pending, so, all of here will be seen here. And if ever I want be, uh, to be a specific, let's say, for example, um, I want to show all leads that have new and pending, then I want all makes only for the Bentley. And then, I want the location or the Emirates only for Dubai. See? So, it's automatically sorting out. And then, if ever I wanted to put it on the spreadsheet, just simply, um, select this export, then automatically, um, it will download all data. Let me just, uh, give you the sample. I'll just put the entire screen instead. There you go. So, let's go back here. So, once I download, I download it, and then here. Let's see if the data comes on. Okay? So, let's verify. First out of fifth row. There you go. Okay. Please, you downloaded the leads. Yeah. So, automatically, um, we have the client name. So, it's correct. Client name and then mobile. So, all information inside this, uh, table will download. If you click... Click export. So, since we have a total of two here, then automatically, um, if we download this through spreadsheet, we will save the two data as well. Any question, uh, Sir Nash? No, sir. Okay. So, let's proceed with the, um... Um, just to confirm, Sir Nash, um, is this correct? Uh, this is the one that you requested to me last time. Last meeting we... What did I? Is this correct? The one that you... This is the one that you requested before? Yeah, yeah. It's fine. Like, uh, contacted those... I need to know, but, uh, the thing is now... It's okay with the drop-down. It's fine. Okay. That's great. And then, let's try if it's, uh, if the search bar is working. Let's try to search this one. So, even if we're already in the page five, let's try go back to page one. Then, try to search. See? I can see the specific, uh, client name. And then, let's go here in the, uh, inside the leads. So, for the client name, uh, for the client records, just simply click the client name. And automatically, um, you will go here. So, once you click the client's name, automatically, you will see the client name here. Then, the submitted. If when that client, uh... Submitted the form. And then, below that is the vehicle information. So, make, model, and, uh, phone, and email. And then, the seller's description as well. And then, here is the notes. This is where you will, um, input a note. Uh, sorry, Nash. For documentation purposes. Let's say, for example, um, you already contacted that person. So, you will simply

put here. Then, automatically, it will say... Okay, put like this. Uh, contacted. Offered, uh, 50,000. Sorry, contacted of the 50,000. Offered 50,000. Of five? Offered, offered. He was offered a price of 50,000. Ah, okay. Contacted and offered 50,000. Like that? Asking 100,000. I want to see where this data will go. Oh, it will just, uh, go... here, uh, sir Nash. Once you click this... Okay, asking for 100,000. Save it. Would you like to change the status? Change status to contacted, yes. Contacted. Contacted. Hmm. There you go, sir Nash. Automatically, um, we have a recent activity here. So, first is the activity. Uh, status change new. Contacted when you already put the notes here. See? The time frame. Okay. And will this customer be shifted to contacted? Oh, yes. Uh, let's try to see that. Uh, sorry. I forgot what, what leads is that. Let's try another one. Lead number 30. 30. Oh, 30. Paste it. Control paste. I think in the search. You already did it before. Oh, there you go. Oh, see? Uh, it changed to the status contacted. Okay. Okay. Then also here. You will see the status here as well. Okay. Okay. And since we already discussed the activity, so all activity you will change here will be go here as well. This is like just the history. So, if ever you put a note here and then you click save, there's a, uh, there's a date here, then the time. So, let's say for example, um, for the car vibe demo lead 030, I already deal with this person. Automatically, there's a. Another information that you will need to input first is the purchase price. This is where you, let's say, for example, um, you deal with that person for amounting of 100,000. Okay. Put it. And then you purchase that car here, uh, for today. Then if I click the save changes, it will go through inventory. So if we check the inventory, we, uh, we have here the. Okay, sir. Uh, if I just want to inform you, sir, now, since, um, this is not a real lead, it will show the unverified number, but if ever this is a real number, this, uh, unverified number will be hidden. Okay. So for the inventory, this is all about, we have bought and now owned. So all cars that you purchase will be shown here. So let's for example, um, since you. Uh, since you select deal in that drop down status, plus one, that will be plus one and then capital tied up. So you purchased the, you purchased that car amounting of 100,000 and then profit will be shown here as well. Then the developer 2% share. How will you show the profit? Because now you need to put it sold. How will you show the profit? Oh, yes. Um, once you click. The mark sold, let's for example, this, uh, BMW five, uh, you already sold it to another, uh, person. If I pick the mark sold, you will input the sale price. Let's say 105 and then there's a calculation here that you will see sale date means when did you, uh, sell this, uh, car. So sale price, 105. Purchase price is 100,000 and then the profit will be 5,000 then developer, uh, developer share is 2%. So how we calculated this, let's go here. Very simple calculation. Um, we just calculate the profit, uh, times 2%. So 100. Any questions, sir? Nash. Mm-hmm. Oh, well, we will, uh, talk about this later. Okay. Okay. Because you, you saying now you will be taking 2% in all leads. Did we, is that what we discussed? Uh, yes. Uh, sorry, Nash. Each, uh, each customer. But, uh, later on, um, we will discuss it. And, uh, in the commission. Sure. Okay. So let's say for example, for the same sale, I click the same sale. Hmm. And then it will automatically status sold. So. So action needed here since, um, it's already dealed with that person. Then let's go here in the commission. So for the commission, this is all about the developer side. So outstanding is the 102%. So this is the, uh, this is the, uh, this is the 2% share of the developer side. Then this is, uh, quieter, quite early. I'm sorry, Nash. Um, so the developer, very, very good point, very good point, hold on, hold on, okay, developer, it's okay, uh, these ones we can sort out, but remember, this is a company that is the, is, um, money generated by the purchaser or a closer. Hmm. So if this is a super admin, you need to add, like, let's say staff number one, staff number What is the commission is making, we will agree on the commission that he needs to make in every car that he close. So when, every time I give access to my staff, let's say, uh, the guy who's working for me, closing deals, right. I will call him purchase. Okay. But you sir, maybe he takes 10% of the, of, uh, profit. Okay. I need to be able to now you are showing me. Developer side for me, I need to have the same thing on staff on staff. Yes. Like, let's say call center. Number one, every lead that we close, he's making, let's 35 dirhams or 50 dirhams, every deal that is closed. Okay. On the property. So I need to be able to see, okay, let's say call center. Number one, her name is Maricel. I need to see, she made like the way you did for this. I. I. need you to give me, like, let's say four or five free slots that I can add my staff because people will work for me and all these people needs to make money. I need to be able to see that. Okay. Sorry, Nash. I think, uh, we will just add another account on that because, uh, last time like, uh, it's not an, see this, this, this dashboard, Matt, the dashboard. Is for super admin. Mhmm. Right? Yeah. Super admin will have workers. Like what you have done for yourself here. You get it? Yes. On the same commission place. I need to have three or five staff for the start. Mhmm. Okay. Got it. Uh, sorry, Nash. So. You got me. Mhmm. I just wanted to. Let's Mhmm. Number one is called a closer. Number two is called call center. One call center. agent you know okay let's say a call center agent how much is making i will tell you how much they need to make for by every lead closed let's say same thing by every lead close they make two percent okay so um sir nash regarding on that i need the specific roles that you will need to see inside the commission and then i need to see let's say for start put three call center agent so you just wanted to see total of three or three call center critical center and three purchases and three purchases okay okay so all these in terms of past is the number one purchase number two the only thing i will do change is when let's say nash is the purchase number one i will put him nash okay i can edit the name oh okay understood sir nash so you

get it you can edit each uh each purchases and call center yes name yes got it so and in this uh it's uh same like two percent and for purchaser he has to be they always get ten percent of the profit so every um every call center agent and purchases uh no no no no call center agents two percent like he will make this a hundred for like you hundred okay call center will got i mean will receive two percent commission yes from the profit yeah from from the profit margin okay and how about for the trip uh for the purchases role for the purchase of the door they get 10 from the proceed margin sorry 10 yes on the profit margin for the profit margin and then let's say for example for the role of call center agent what they need to see okay that one we will call center agent you give him they always need to see they always need to see a contact of the customer contact of the customer contact name of the customer name of the customer uh karmic karma yes everything on the car every details of the car oh so just to confirm sir nash are we talking about this leads this one yes but call centers will never see whether profit whatever we are doing he will never see so he can only do up to the status he can change status or like that okay would you like me to hide this part instead so let's say for example uh for the call center agent they will only see client name until date and then if they check the record they will not see um let's see if there is a profit here no so only this one only this information only this that is his job so that the purchaser puts the purchaser will only see he will put the price okay for the purchaser he can he should never do not give the purchase of the contact don't show him the contact of the customer okay but he can put how much he bought the car and how much he sold okay thank you so just wanted to confirm sir nash i just want to visualize everything if uh it's a role so i'm sorry i just want to visualize everything so let's say for example um okay uh we're already done with the customer agent role so for the purchaser they will not see client name until here no no no no he will see client name you will see the car only hide for them the phone number okay client name card how about the card details card details as well but the phone number phone number you should never know because you should never contact the customers okay so if i click this one so let's say um we are now in the role purchaser so if i click this car vibe demo i mean if i click the client name i will only see this part yes he should not see these parts i mean of the customer but every time he buy the car he he's able to put how much he purchase the car okay just very much i just so if i'm uh if the role of purchaser is here like this if the role is uh purchaser i will see he uh i will see this information but this contact number will be hidden right contact number will be hidden yeah and then for the status and purchase about the status one that as he can change he has closed the deal so yes it's a deal he can go down and click it's deal understand and he puts the price selling now they need to tell me i bought this car 100 i'm selling then me i will update in the system okay let me just input that one as well so far by demo so the role of purchaser is only changing this status to deal right yes because or inspected anything he has to put a inspected he did not show up whatever also call center can do that because call center called the person and maybe the purchaser did not put that this is a deal you understand call center can update it for him but in the customer role uh sir nash are we going to uh show this uh deal because if we select deal automatically um you will need to invite uh you will need to input the purchase price yeah that purchaser he has to put that he bought the car 20 000 he bought the car 100 000 purchaser needs to update that and how about for the customer service um do they have the uh do they have this option deal part or no yes they can change it as well no problem okay the call center agents they can change as well okay okay just in case if the purchaser did not do it you get it okay got it sir nash okay got so the only thing i don't want from the purchaser is a number called a customer number because purchaser needs to concentrate on purchasing cars you know the number can only be seen by call center and the super admin okay got it uh sir nash okay okay so whatever you have done on the commission i need to be able to see call center one he has made a hundred uh purchaser he has made these you know so that we can know at the end of the month how much needs to be paid out. Okay. But just to remind you, Sir Nash, for the commission, this is for the developer 2%, but since this is a quarterly, it will be recorded monthly but paid every 3 months. Yeah, it's fine. For me, monthly for my team, I need to know what they are doing. Okay. Okay. Sure. Let's do that way. And so it means you also need to put a drop-down that, let's say, developer, you select developer, you see how much he has made. Then you put a drop-down, purchases, you can see. Like, I don't need to see everything. Okay. I can have one page that has everything, but if I need to filter call center only, how much they have made, I'm not there, not where you're clicking now. On the same place here on the top of these 100, you know? Okay. I need to be able to have, or the same place, commission, on the commission place, then there is a drop-down again. You get it. Did you get it? Did you get it? Yes, Sir Nash. It's like just in the leads. Like, say, for example, Yes, yes. Like, I need to see call center only. How much call centers are making in Carvai? They made 100,000 this month. Very good. Let's fill it. Developer, how much I owe him? Developer, I owe him 200,000. Very good. Purchasers, how much they have made? They have made this much. Like that. Okay. Understood, Sir Nash. Thank you for clarifying that. So, just to confirm, Sir Nash, for the table, this is the table, right? Yeah. So, for the quarter table, quarterly table, is this fine already for you? You will see Okay. You will see the month, car sold, profit, and then share. Very good. Very good. Very good. Okay. Great. And then, okay, I will Okay, I think I will discuss. That's enough. But don't forget that because remember this is a super admin

dashboard. You are working there. There is other people who will work as well. They need to, I need to, be able to see their commission and everything that is happening. Okay. Understood. Okay. And remember the super admin also is giving them access. So, that one, you need to always make sure that super admin has access to everything. He can disable, he can enable anything. Oh, sure. I think I just already put it there inside the settings. But later on, let's discuss it. Okay. Okay. Okay. Let's go. Continue. Okay. Okay. So, we're already done with the commission. Later on, I will finalize it. And then, let's proceed with the incomplete forms. So, for the incomplete valuation forms, this is the visitors who started the valuation and then they abandoned the valuation form in the landing page. Okay. So, let's say, for example, I'll give you an example, Sir Nash. So, for let's say, for example, I searched the website Carvive Dubai. And then, I want to input my name. Let's say, for example, Gene. And then, phone number 05012 For example, like this. Like that. And then, as long as I already inputted my phone number and name, automatically, I will receive the data even they don't know that I already has even they don't know that we already have their data okay so even if i close this one we still receiving their um information even if they don't proceed to step two until to step three okay good okay let's try let's try to let's for example i close this and then i i simply x that then automatically it will go here it's not automatically it will go here i will check it later on i think it's not working because um i inputted a demonstration here in the leads inside the leads okay so after let's say so any question on that uh sir nash for the incomplete valuation form no it's okay okay so let's proceed with the black numbers so black numbers this is the if ever um that person or that visitor just um playing for us let's say for example um that person is just trolling so you can you can simply um block that here in our side so once you block that phone number and then they attempt to fill out here we will not receive their information anymore but still we have it uh we have still his or her information since we blocked that phone number okay then for the vehicle catalog this is where you will input everything inside this uh valuation form let's say for example zero five one two three four five six seven eight here this this is where it will reflect uh sir nash so if ever i let's try if ever i input a model let's try so for the rolls trials uh can you provide me a model sir nash let's try if um this one i think we already oh sorry sorry rose royce yeah and oh we already are down okay let's try um let's try another trim let's try to add trim and then let's uh let's try if it will reflect here inside the valuation form so let's try sample team and then i added if i already added here inside the kulinan model i mean inside the model kulinan from the rolls royce if we go back here let's try to refresh and i visited this um form there you go that is sorry rolls royce super the rolls royce we have colinan and then if i selected this i type if we go here in the uh trim you will see the sample trim so everything we add here automatically will show here even here in the make okay okay any questions sir nash no no okay okay then inside the settings this is where you will uh Notify If you want to notify Through your email sir Nash Let's say for example You change this email To Carvive at gmail.com So every time Every time Someone has new leads Every time We gather data from new leads You will receive A notification Through your gmail account Put the real gmail account For Carvive We have a gmail It's Carvive 025 025 I think you already logged that in On my end Carvive 025 At gmail.com And then We have the staff account So earlier you mentioned That you wanted to have Its access To Carvive From every People you wanted to create From the staff accounts So I think I will just Add The option to edit Or add right sir Nash What options would you like me to Add inside the staff accounts What do you mean You said that For the staff accounts You want to edit and then delete only Yeah like you can add You can add the staff You can Limit access You can able to enable You can see these You know like You can limit the access What they need to see Okay Okay Okay sir Nash Enable Or disable Okay and if The same enable and disable means If the staff leave I can block him right Yes If ever you disable that Account And then they try to Log in They will not They can't log in And there's a model show That like There's a pop up Showing that This account is no longer Available Or This account is no longer Available to log in Due to For a reason like that Okay Okay So Aside for that Any question Sir Nash For the Demonstration So For this part So why It had now This 70 Like this Oh yes Earlier I clicked this Add demonstration right So I have the 560 leads I added 560 leads here For demonstration So that I can show you The total I mean I can show you the Dropdown Functionality Because if This will leave empty I can show you that Okay No problem So for me now What I like I want to see I want to see The next time When we have meeting That functionality of Commission for every staff You know What the purchaser is seeing You need to show me What the purchaser is able to see What the call center is able to see On his dashboard So Now you have super admin here Sir Nash right Next we will have to open a tab What the call center is seeing Okay Okay Okay Okay sir Nash But match This is very important Because you know You You're not gonna work alone You understand Okay When the tea company become big There is a team And in this team Every data needs to be collected On the dashboard Okay Got it Sir Nash Yeah So that actually On this dashboard end I really need to see that part of Agent number one Agent number two Agent number three Their name is Michael Okay Michael Mike Mark Matthew Whatever This is what agent number three Is making right now He has brought in ten customers He has made a hundred thousand You know The purchaser He has dealt with twenty customers He has closed ten You know That is the purpose of a super admin Okay Okay Got it sir Nash Okay Okay Thank you for that

information Sir Nash So No problem So far so good But The The the key thing of a dashboard Is to be able to see customer flow Is to be able to see What the company is making In terms of staff performance And Money generated Okay Even I think also I forgot one key thing Are you able to connect Where the lead source is coming from What do you mean by that sir Nash I guess The customer came from Google So Are we able to know through the dashboard He came from Google Or he came from Instagram Because That is something you need to add in the Customer First entry Where did he know about us Instagram Or Google You know Like that We can have the pixel So for the pixel sir Nash This is where we can track All people Visiting the website But We can track That what you're trying to say So You to know where See when the company is big bro You need to know where you are getting money from So that you can do marketing there Are they coming from TikTok Are they coming from Instagram Are they coming from Facebook You get it Yes You know So when we receive his inquiry We need to know Oh he came from Google Oh he came from Facebook You get it When we are receiving customers inquiry So you need to give them an option of Where did they Where they hear us from They will click drop down Facebook They will click your Instagram Like that Let's try if it's possible And I'll get back to you on that sir Nash For now Let's focus on the Of the Of this Of this status that we need to create Okay Talos This is very important Let's see that one later on Okay For the customer flow We will do it later Last last Okay so Sir Nash Let's talk about that later And I think If ever we finish this Or we finalize everything on this part Okay So next time when we meet Or when you're ready This is ready Let me know We can log in And we can See What is the progress Okay Got it sir Nash Right I'll give you Anything else you need to tell me Nothing Sir Nash I think I already have the information Or if ever I have a question I'll just send it through the GC Yes So far bro If all this functionality work You're doing a good job I really like it I would like to log in from my end And see what exactly So you need to push it So that you give me access I need to log in with a computer And I see what functionality I'm getting From my end as well Okay Would you like me to push it right now Or later on After we finalize Just fix these parts You know So that We have a complete thing Okay Alright Okay Thank you very much Let me cook now And I eat bro Okay thank you Tomorrow my kids are going to school And I know it's late today In Philippines Okay Thank you very much For your time sir Nash You're welcome Thank you Take care Take care Bye Thank you sir Nash Thank you
